

Kaboore SDK for iOS (Version 2.0)

Contents

Kaboore SDK for iOS (Version 2.0)	1
Description	1
CMS / API	1
Samples	2
Specifications / Features	2

Description

Kaboore SDK offers the possibility to add a 360 Image and 360 Video full featured player to your apps and WEB site. In a very easy way you will be able to create VR 360 video / images based apps.

Interaction

Kaboore lets you interact with your videos by using the touch display or the motion-based sensors.

HotSpots

Create even richer apps with our innovative and intuitive Hotspot technology. Just select where you want to add a Hotspot in your video's 3D virtual Space and time, set their appearance. When the Hotspot is touched, clicked, watched... you will be free to add any action:

- Link with other videos (Story- Telling)
- Adds
- Augmented information.

The hotspot technology is also compatible with VR mode for Google CardBoard or similar devices with our CrossHair interaction and events.

CMS / API

Use our Kaboore CMS / API in order to manage your videos in your different applications.

Samples

With our trial package, you will have access to several samples (LiveStreaming, Images and Video with Hotspots)
